## ***Interpreting Physician Notes***

**Dr. Priya Sharma (Pulmonology / Endocrinologist) — December 9, 2025**

**Primary Diagnosis:** Type 2 Diabetes

HbA1c above 6.5% confirms poor glycaemic control. Fasting glucose elevated. Microalbuminuria detected — early nephropathy screening required. Lipid panel shows dyslipidaemia pattern common in metabolic syndrome. Recommend titrating metformin dose and lifestyle counselling.
